

Do you have 90 seconds to check your spine?

MyoVision Scan

- State-of-the-art digital sEMG scanning device
- Identifies areas of dysfunction within your spine, nervous system and associated muscles
- Safe, accurate, painless and non-invasive for everyone
- Specific data in a computerized spinal report

Symptomatic

Goal

The MyoVision Scan takes only 90 seconds and is accurate, painless and non-invasive. It is completely safe for everyone, including infants, children, pregnant women and seniors. It simply requires the placement of small scanning devices against the skin.

The MyoVision Scan reads muscle activity correlated with misalignments in your spine. The readings look at varying levels of muscle tension and patterns of directionality to determine areas of imbalance. The scan allows us to ensure that your spine and nervous system are functioning optimally.

Originally developed for NASA to measure changes in astronauts, MyoVision's state-of-the-art technology helps our doctors quickly and objectively identify any spine and nervous system concerns. The results are a succinct way for you to have more than just an opinion; you have specific data in a computerized spinal report.
